

## **GAS MANAGEMENT**

# **Molecular Sieve 13X and Indicating 4A Moisture Traps**

## **PRODUCT DESCRIPTION**

Agilent Indicating Moisture Traps are designed to remove water, oil, and organics from gases employed in, but not limited to, gas chromatography. Refillable moisture traps are constructed from Lexan polycarbonate tubing. Lightweight, chemically resistant and of superior strength when compared to traps manufactured from acrylic, Agilent Indicating Moisture Traps have become the chromatographer's choice for water adsorption from GC gases.

The Molecular Sieve 13X and Indicating 4A (MT Series) blue indicating sieve turns buff at 20% relative humidity. This moisture trap is preferred adsorbent for GC gas drying.
